

The folders named with the year “YYYY” contain the measurements obtained with the DC and PC monitors within files named “DD-MM-YYYY, route.nap”, where “route” indicates the traveled route along which the measurements were acquired. If no “route” is given, then a “*.gpx” file is available with the exact traveled route positions and corresponding time stamps.

The “*.nap” file is a txt file where the first three columns give the time instant in which each measurement was acquired (hour, minute and second), the fourth column gives the corresponding DC measurements in mm/m^3 and the sixth column the corresponding PC measurement in ng/m^3 .
